Summary

AI undergraduate student at Johannes Kepler University Linz with hands-on experience building AI-integrated full-stack applications using JavaScript, Node.js, APIs, authentication systems, databases, and cloud deployment. Experienced in developing user-focused products involving LLM integration, prompt engineering, and AI-powered automation. Strong interest in startups, applied AI, and scalable web applications.

Education

Johannes Kepler University

Bacheors

Artificial Intelligence

Linz • March 2025 – Expected July 2028

Relevant Coursework:

Data Structures & Algorithms, Python Programming, Statistics for AI, Web Development, Machine Learning Fundamentals, Linear Algebra, Database Systems

Experience

Assistant to Auditor

May 2024 – August 2024

- Assisted with reviewing financial and tax-related records and documentation
- Worked extensively with MS Excel for data organization and reporting support
- Supported documentation handling and administrative audit processes
- Developed attention to detail and analytical thinking in professional work environments

Mathematics

Tutor

July 2025 - September 2025

- Conducted personalized mathematics tutoring sessions for students
- Prepared learning materials, practice questions, and concept explanations
- Strengthened communication and problem-solving abilities through teaching

Projects

AI Resume Builder

Tech Stack: Node.js, Express.js, Supabase, HTML/CSS, Stripe, Vercel, LLM APIs

- Developed an AI-powered resume builder that generates ATS-friendly resume content using prompt engineering and LLM integration
- Implemented user authentication, database integration, and credit-based usage system
- Integrated Stripe payment gateway for purchasing AI generation credits
- Built editable resume workflows with PDF and JSON export functionality
- Designed multiple resume templates and user customization features
- Deployed the application using Vercel

MysticAI | AI-Based Palm Reading & Prediction Platform

Tech Stack: JavaScript, Express.js, NVIDIA NIM API, Database Integration, Frontend Framework

- Built a full-stack AI application allowing users to upload palm images and receive AI-generated future predictions and responses
- Integrated NVIDIA NIM API for AI-generated analysis and conversational interactions
- Developed backend API routes and database functionality for user interactions
- Implemented image upload workflows and dynamic AI prompt handling
- Designed and structured one of the first independent AI projects built during early JavaScript learning

AI Study Assistant Platform | Hackathon Team Project

Tech Stack: AI APIs, Web Development, Prompt Engineering

- Collaborated in a hackathon team to build an AI-powered study platform for students
- Created features enabling users to upload lecture notes and generate study roadmaps, quizzes, and summarized notes using AI
- Contributed to idea development, feature planning, and implementation during rapid development cycles
- Focused on improving personalized learning workflows through AI-assisted study support

Skills

🔗 Programming Language

Python, JavaScript, HTML/CSS

🔗 Frameworks & Tools

Node.js, Express.js, Git & GitHub, Supabase, Vercel

🔗 AI & Backend

NVIDIA NIM API, LLM Integration, Prompt Engineering, REST APIs, Authentication Systems, Database Integration

🔗 Other Tools

MS Excel, Final Cut Pro

Certifications & Competitions

IBM Prompt Engineering Certification

September 2025

Hackathon Participant – AI Education Platform Project

December 2025

Participant – KEBA Coding Contest

May 2026 - June 2026
